

Installation Instructions YAMAHA G1 4" Lift Kit

FRONT

- Raise unit and support frame with jack stands.
- Remove tie-rod ends from steering arms.
- Remove upper shock mount bolts.
- Remove A-arms.
- Install new upper shock mount brackets.
- Install new A-arm carrier bracket with spacer tubes.
NOTE: *When A-arm carrier bracket is installed, bracket will be 2" forward of factory A-arm mounts.*
- Re-install A-arms and shocks.
- Install steering risers to OEM steering arms.
- Remove front bumper and install bumper extensions. Re-install front bumper.
- Install wheels.

REAR

NOTE: *Accelerator cable needs to be disconnected and re-routed on some models.*

- Place jack under rear end of cart and remove upper shock mount bolts.
- Lower rear end approximately 5". Make sure all wiring and hoses are free.
- Install new shock mount risers using u-bolts and existing shock mount holes on frame.
- Re-install shocks and install wheels.

ADJUSTING TOE ON FRONT WHEELS

- Drive cart forward approximately 10' and set hill brake.
- Adjust tie-rods until front wheels are 1/8" narrower at front tires.
